Department of Computer Science and Engineering
ASSESSMENT TOOL 1 – APPLICATION BASED QUESTIONS

Course Code:	CSA06	Course Title:	Design and Analysis of Algorithms
CO Assessed:	CO1 – Precision (BL1, BL2, BL3)	Assessment:	Assessment Tool 1 – Application Based Questions
Weightage:	40% of CIA	Total Marks:	100 (2 Questions × 50 Marks)
CO1 Statement:	<i>Determine algorithm efficiency using asymptotic notations and mathematical techniques including Master Theorem and substitution method. (BL1, BL2, BL3)</i>		
Student Name:	P. Sai Charan Tej	Reg. No.:	192465048
Section / Batch:		Date:	

Instructions to Students

- Answer BOTH questions. Each question carries 50 Marks. Total: 100 Marks.
- Clearly show all steps in derivations and complexity analysis.
- Use proper asymptotic notation (Big-O, Big-Θ, Big-Ω) wherever required.
- Justify each step in recurrence solving using appropriate methods.
- Neat presentation and logical explanation are mandatory

Question Type	Focus Area	Questions	Marks
Application-Based Questions	Apply Master Theorem and asymptotic analysis to real-world scenarios	Q1 – Q2	Q1 –50 Q2 –50
GRAND TOTAL:		100 Marks	

SECTION A – APPLICATION BASED QUESTIONS

Q43. Application: AI Model Training Pipeline

An AI training system processes datasets using the recurrence $T(n) = 9T(n/3) + n^2$. Apply the Master Theorem to determine the time complexity. Clearly identify parameters and justify the selected case. Analyze how training time grows with dataset size. Interpret efficiency using asymptotic notation.

Q44. Application: Blockchain Transaction Verification System

A blockchain system verifies transactions using the recurrence $T(n) = 5T(n/5) + \log n$. Apply the Master Theorem to determine the time complexity. Identify parameters and justify the case selection. Analyze how performance changes as transaction volume increases. Interpret efficiency using asymptotic notation.

I P. Sai Charan Tej (192465048)__(Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

RUBRICS FOR CALCULATION

Criteria	Wt.	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Problem Context	20%	Clearly understands the problem and accurately identifies all requirements	Good understanding with minor gaps	Basic understanding; some requirements unclear	Poor understanding or misinterpretation of the problem
Application of Concepts	30%	Accurately applies appropriate concepts to solve complex problems	Applies relevant concepts correctly with minor errors	Applies basic concepts with limited accuracy	Fails to apply appropriate concepts
Problem-Solving Approach	20%	Logical, well-structured, and efficient approach	Mostly logical approach with minor gaps	Basic approach with some inconsistencies	Illogical or unclear approach
Accuracy of Solution	20%	Completely correct solution with proper justification	Mostly correct with minor errors	Partially correct solution	Incorrect or incomplete solution
Clarity	10%	Clear, well-organized, and properly explained solution	Understandable with minor clarity issues	Limited clarity and explanation	Poorly presented and difficult to understand

Marks Evaluation:

Question No.	Understanding of Problem Context (20%)	Application of Concepts (30%)	Problem-Solving Approach (20%)	Accuracy of Solution (20%)	Clarity (10%)	Total Marks
Q1 (50 Marks)						
Q2 (50 Marks)						
Overall Total (100)

Q43. Application: AI Model Training Pipeline

Given Recurrence Relation

$$T(n) = 9T(n/3) + n^2$$

The standard Master Theorem form is: $T(n) = aT(n/b) + f(n)$

Step 1: Identify the Parameters

$$a = 9$$

$$b = 3$$

$$f(n) = n^2$$

Step 2: Calculate $n^{\log_b a}$

$$n^{\log_3 9}$$

Since $3^2 = 9$, $\log_3 9 = 2$.

Therefore, $n^{\log_3 9} = n^2$.

Step 3: Compare $f(n)$ with $n^{\log_b a}$

$$f(n) = n^2 \text{ and } n^{\log_b a} = n^2.$$

Hence, $f(n) = \Theta(n^2) = \Theta(n^{\log_b a})$.

Step 4: Select the Master Theorem Case

Case 2 applies because $f(n) = \Theta(n^{\log_b a})$.

For Case 2, $T(n) = \Theta(n^{\log_b a} \log n)$.

Step 5: Final Time Complexity

$$T(n) = \Theta(n^2 \log n)$$

Interpretation

The AI training pipeline divides the dataset into 9 subproblems of size $n/3$. Each level performs quadratic work (n^2), and there are $\log n$ recursion levels. Therefore, the total running time becomes $\Theta(n^2 \log n)$. As the dataset grows, the training time increases slightly faster than quadratic because of the additional logarithmic factor.

Q44. Application: Blockchain Transaction Verification System

Given Recurrence Relation

$$T(n) = 5T(n/5) + \log n$$

The standard Master Theorem form is: $T(n) = aT(n/b) + f(n)$

Step 1: Identify the Parameters

$$a = 5$$

$$b = 5$$

$$f(n) = \log n$$

Step 2: Calculate $n^{(\log_b a)}$

$$n^{(\log_5 5)}$$

Since $\log_5 5 = 1$, $n^{(\log_5 5)} = n$.

Step 3: Compare $f(n)$ with $n^{(\log_b a)}$

$f(n) = \log n$ grows much slower than n .

Thus, $\log n = O(n^{(1-\epsilon)})$ for some $\epsilon > 0$.

Step 4: Select the Master Theorem Case

Case 1 applies because $f(n)$ grows asymptotically slower than $n^{(\log_b a)}$.

Therefore, $T(n) = \Theta(n)$.

Step 5: Final Time Complexity

$$T(n) = \Theta(n)$$

Interpretation

The blockchain system divides transactions into 5 smaller groups and performs only logarithmic extra work at each level. The recursive work dominates, giving an overall linear time complexity $\Theta(n)$. As transaction volume doubles, the verification time approximately doubles, making the algorithm scalable.
